

KEEP IT SAFE

Five things you can do to prevent or recover stolen equipment.

TRACK IT

Equip your machines with **GPS LOCATION TRACKING SYSTEMS**. If they are stolen, you'll be able to quickly locate and recover them.

SECURE IT

Use **AN ELECTRONIC KEYING SYSTEM** to key all your equipment with the same code, or code each key to a specific operator. These systems can't be hotwired. The machines must be started with the key.

FENCE IT

Physical fences are good but not always practical. **USE ELECTRONIC GEO-FENCING AND TIME-FENCING** to alert you when machines are moved to the wrong place or started at the wrong time.

REPORT IT

If a machine is stolen, **CALL THE POLICE** first. Then call the equipment manufacturer. When the machine is brought to a dealer for repairs, it will show up on the manufacturer's stolen equipment database.

TAG IT

Weld your company name or phone number on the buckets, boom and frame. **VISIBLE, HARD-TO-REMOVE IDENTIFICATION** deters thieves and allows the police to quickly see who owns the machine.

BUILT FOR IT.
